SUMMARY

Software engineer with more than three years of enterprise experience at Chevron across cloud-hosted applications, document workflows, automation, identity controls, and production support, plus independent products in B2B SaaS, browser automation, and real-time systems. Strongest in TypeScript and Python across React, React Native, Angular, Node/Express, and FastAPI.

PROFESSIONAL EXPERIENCE

Chevron Corporation

June 2022 - August 2025

Software Engineer

San Ramon, CA

- Helped lead a company-wide Azure-hosted platform (Azure, Redis, Python/FastAPI, Angular) supporting workflows that process 1M+ documents annually across 30+ global facilities.
- Consolidated fragmented manual document workflows into a cohesive digital platform associated with annualized savings above \$10 million.
- Redesigned SharePoint retention-label updates in PowerShell with parallel execution and adaptive throttling, cutting processing for ~1.2 million documents from about 48 hours to about 3.
- Containerized and scaled services with Docker and Azure Container Apps, resolving a bottleneck associated with roughly fourfold increased capacity; automated CI/CD via Azure Pipelines and Ansible.
- Supported Entra ID access management with least-privilege governance; mentored 4 developers across CI/CD, front-end, and UI/UX.

Independent Software Engineer & Product Builder

2023 - Present

Part-time alongside Chevron through August 2025; primary focus thereafter

- Built a pre-seed cross-platform safety-management MVP (Heritage Safety Solutions) with React Native, TypeScript, Express.js, PostgreSQL, and GCP, delivered in under six months for a 50-employee pilot.
- Implemented claims-based RBAC with five permission tiers, phone/email MFA, and server-side filtering, sorting, and pagination that cut response times up to 50% versus an earlier NoSQL prototype.

PROJECTS

Multapply - TypeScript, Chrome Extension APIs, LLM APIs

Agentic job-application assistant (prototype). Heuristic job-post detection works without per-site integrations; LLM-assisted DOM analysis drives multi-step, human-controlled workflows.

Buzzr - React, WebRTC, GCP, Swift, Kotlin - buzzrapp.com

Real-time one-on-one communication MVP. Targeted Swift and Kotlin modules for in-call speech-to-text, face-detection privacy controls, MFA, and an LLM-assisted transcript moderation pipeline.

EDUCATION

California Polytechnic State University, San Luis Obispo

GPA 3.9

B.S. Computer Science, with honors | Qualified: California IT Specialist I & II, IT Associate

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C#, Java, C/C++, PowerShell, Swift, Kotlin

Front-end & Mobile: React, React Native, Angular, Redux, Next.js, HTML/CSS, Chrome Extension APIs, Jest

Back-end & Data: FastAPI, Node.js/Express, ASP.NET Web API, REST, WebRTC, PostgreSQL, MS SQL, Redis, DuckDB, Power BI

Cloud & DevOps: Azure, Azure Container Apps, GCP, Docker, Ansible, Azure Pipelines, CI/CD, Playwright, Entra ID, RBAC, MFA
